

# The TempArmour™ Vaccine Refrigerator

## Exceptional vaccine protection AND cost savings

### Lower capital, human resource, electrical & maintenance costs

The TempArmour Refrigerator stays within temperature range for up to 6 days through power outages, cord unplugged, or other disruption to its operation.

#### Cost savings result from:

- Drastically reduced cold chain incidents and vaccine losses
- No need for backup batteries or generator
- No remote monitoring systems or on-call staff required
- Lower administrative costs

The refrigerator also has a very low power consumption and does not require scheduled maintenance.

### What our Customers are saying:

#### Cost Savings Related to Power Outages

"We experienced a power outage due to Hurricane Irma for 6 days. Temperatures in our TempArmour™ Refrigerator stayed in range that entire time."

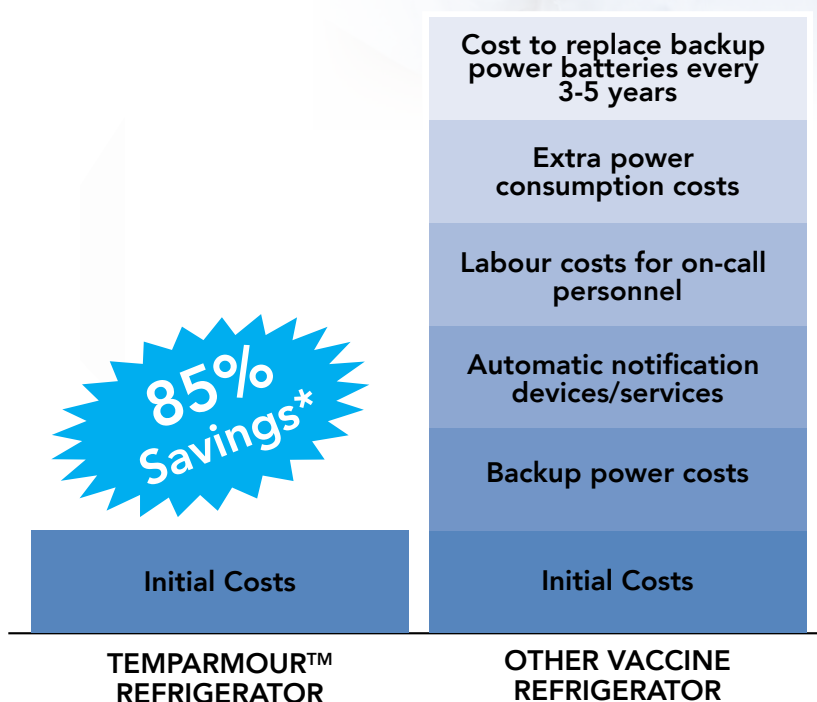

— *Pediatrics by the Sea, Delray Beach*

#### Cost Savings Everyday

"...the power saving is amazing. The compressor rarely comes on, and the temperature is as stable as can be asked. This fridge is a saver! I would recommend it to anyone dealing with vaccines!"

— *Chippewas of Nawash Heath Centre*
